

OSHA/MSHA JACK STANDS

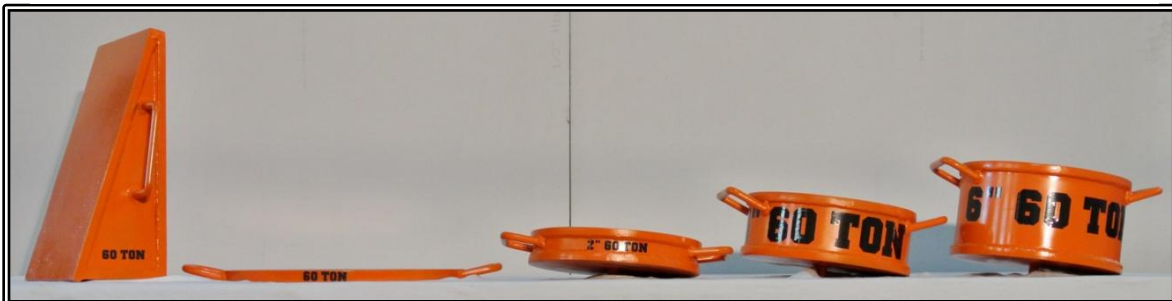

We now offer 60 and 100 Ton stackable jack stands and accessories. These jack stands are MADE IN THE USA and meet OSHA and MSHA certification requirements. These stands are made from Schedule 80 and A36 steel and tested/certified to meet their design capacity. The base, top, spacers, and wedge pin together for safety during use. The decals on the stands are made from a highly reflective film, allowing for safe use in low light situations. The stands are built with a flat side, preventing rollaway and allowing the user to have the stands closer to the machinery.

The jack stands are limitless. Your stand can be arranged from 21" to 48" using the spacers for jobs of all sizes. Whether you're working on off-highway or on-highway trucks, crawler tractors, or wheel loaders, etc. our stands provide stable and safe support.

NOTE: The wedge attachment is for Dozer blade push-arm support while performing blade repairs or changing edges and is rated at 60T.

Pictured below (Left to right): Wedge Attachment, 3/4" Adaptor & Spacer (Flat), 2" Spacer, 4" Spacer, and 6" Spacer.
